World Marrow Donor Day September 19, 2020

Dear friend,

2020 has set goals of life, human strength and noble coexistence, through the coronavirus pandemic.

Through your adaptation to the new reality, how many times have you wondered ***when will the medicine be found?***

- Every time you had to explain to your child why he/she has to play alone without his/her favorite friends.
- Every time you had to train him/her on how to use the mask and the antiseptic.
- Every time you longed to hug your loved ones tight but hesitated because you didn't know if it was safe.
- Every time you heard about people dying of coronavirus
- Now that your laughter, joy or fear live behind your mask.

***When will the medicine be found?*** You wait and you hope.

***Every day*** some very serious diseases, like cancer, set goals of life, human strength and noble coexistence.

How many times have you wondered ***when will the medicine be found?***

- For those patients who have lived with a mask and antiseptics for too long.
- For those times when they long to hug their loved ones tight but they hesitate because they don't know if it's safe.
- For those times when you hear that someone you knew died of cancer.
- For those children or your peers, who hide their laughter, their joy, their fear behind their masks or within an Oncology department.

***When will the medicine be found?*** In that case, ***the medicine could be you!***

A few cells from your blood can give life to a cancer patient. They can remove the mask, the fear, the isolation. You, the Marrow Donor, can eliminate the threat of the disease. You can be life for your fellow human. Get informed and be a Marrow Donor.

***“Let the World Marrow Donor Day be a springboard of life!!!”***

The process is simple.

If you are young (18-45 years old), healthy and you want to give your own answer to the fear and threat of a very difficult disease like cancer, then be a marrow donor.

Just fill out the volunteer application form and give mouth swab (at a special health center). With your registration to the National and Global Bone Marrow Registry, the moment you are found compatible with a patient, with just a few cells from your blood, you can give life to a child or some of your peers.

Just remember that ***the most powerful cancer drug is you!***
